

Verification evidence

Issue #53 | Pull Request #60 | Database, E2E, responsive and keyboard checks

Tested on branch **feature/lab4-verification-evidence-53**, targeting **lab4-staging**. Verification ran on 2026-10-04 to 2026-10-05; the final full suite ran on 2026-10-05 against isolated PostgreSQL E2E databases on port 5433. Credentials and generated seed passwords are omitted.

SERVER	CLIENT	FULL BROWSER SUITE	PERFORMANCE
164 / 164 passed Build passed	89 / 89 passed Build passed	11 passed 10 intentional skips 0 failed	40 requests 0 failures <1s each

Database-to-UI metric trace

E2E-05/06 independently queried the guarded seeded database, fetched the authenticated dashboard API, and read each displayed UI metric. Each value matched across all three layers.

Dashboard	Metric	DB	API	UI
Requester	Open Tickets	2	2	2
Requester	Waiting for Requester	0	0	0
Requester	Recently Updated	2	2	2
Requester	Recently Resolved	0	0	0
Staff	Unassigned Tickets	2	2	2
Staff	My Active Tickets	1	1	1
Staff	My Actions Taken	2	2	2
Staff	Urgent Tickets	2	2	2

Database safety

The runs used ``toktickit_lab4_e2e`` and ``toktickit_lab3_e2e`` on 127.0.0.1:5433. Local credentials were read in-process; the E2E database name was restricted to the dedicated guarded database. Generated seed passwords were temporary and never persisted.

Workflow note

GitHub has no configured CI checks for this branch. These are local test results; peer review and merge remain pending. Issue #54 owns final integration and the Answer Parts 1-9 submission.

Execution and accessibility results

CHECK	RESULT	EVIDENCE
Lab 4 Playwright	21 total; 11 passed, 10 intentional skips, 0 failed	Desktop mutation paths once; responsive paths all viewports
Focused latest rerun	12 total; 8 passed, 4 intentional skips, 0 failed	Dashboard metric assertions + responsive keyboard/focus
Responsive	6 viewport checks passed	Desktop 1440x1000; tablet 834x1112; mobile 390x844
Keyboard Dashboard	Passed for Requester and Staff	Tab + visible focus + Enter; expected filters verified
Keyboard Actions Taken	Passed	Tab + Enter opens; Space toggles; note/save focus verified
Mobile editor evidence	Complete form shown	Fields, Follow-Up Note, Save, Discard; draft not submitted
Browser scan	0 unexpected HTTP failures; 0 page errors	Expected auth-me 401 probes counted separately
Regression/builds	Server 164; Client 89; builds pass	Lab 1-3 E2E: 26 passed, 16 intentional skips, 0 failed

Keyboard/focus checklist

At each viewport, Tab reached the Requester View My Tickets and Staff Open Queue controls; Enter activated each, and the resulting filters were asserted. Tab reached Add Action Taken and Enter opened the form. Tab reached Follow-Up Required, Space revealed the note field, Tab reached Follow-Up Note, and Tab reached Save Action Taken. Every target was asserted to match `:focus-visible`. No action was submitted.

Performance-smoke

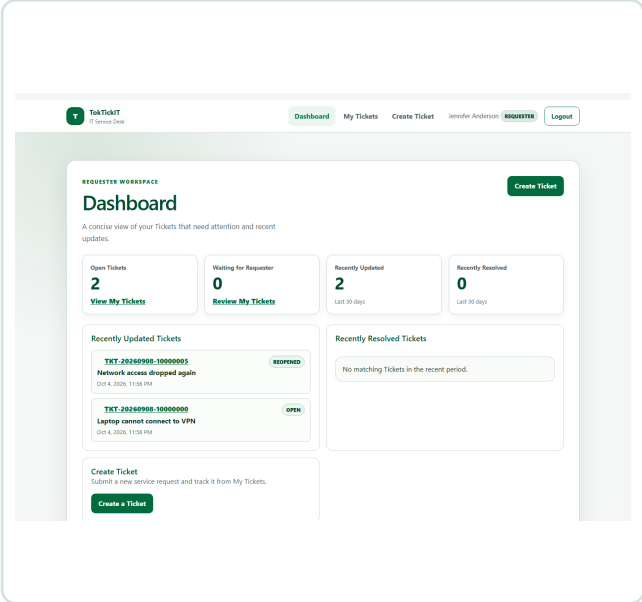

40 sequential requests, 0 failures; maximum duration: Staff Dashboard 381 ms, Requester Dashboard 9 ms, Staff Actions list 9 ms, Requester Actions list 10 ms. All remained below the 1,000 ms limit.

This checklist is targeted keyboard-operability evidence, not a complete WCAG audit or an axe scan.

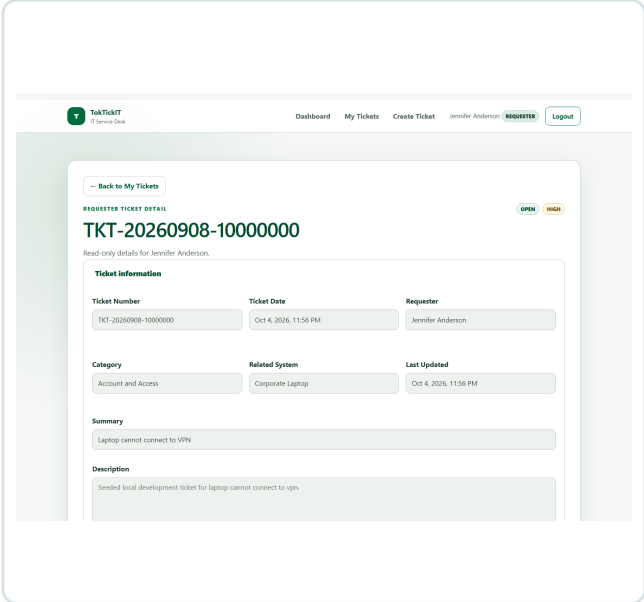

Desktop screenshots

Captured during passing RESP-04 browser checks. The Actions Taken image is a focused capture of the full responsive form so Follow-Up Note and action controls are visible.

Actions Taken

Operational work is recorded under this Ticket with the authenticated staff account.

Oct 5, 2026, 12:56 AM

Performed by Mail Support

ACTION DESCRIPTION

Reviewed VPN connectivity logs and confirmed the affected account.

RESULT

The failure was reproduced and the access policy was identified for correction.
